

# Airpuller AP 95 pat. pend.

With the AIRPULLER AP 95 you can do all the dent repairs from the outside in a fraction of the time that is normally needed when using existing tools. For example:

- on hail damage,
- little dents,
- on double-sided car body areas,
- for panel shrinking.

The AIRPULLER AP 95 will be an indispensable tool in all:

- garages, body shops,
- paint shops, petrol stations,
- commercial and transport companies,
- taxi and hire car fleets.

From now on, frightening hail damage on car roofs can be removed without any problem.

When you use the AIRPULLER AP 95 you will not have to spend time on expensive preparations or on removing the inside trimmings.

The AIRPULLER AP 95 comes at a favourable price, reduces working time, decreases repair effort and is therefore cutting costs.

Up to now the removal of dents in motor hoods could not be done efficiently because of the double panels in the front areas. With the AIRPULLER AP 95 you can spend as little time as possible, working from the outside, on the bumps and scratches.

Metal parts will be saved, resources preserved, the consumption of paint and other chemical products reduced, thus making an **active contribution to save our environment.**

Even panel shrinking of so-called "highspots" is no problem with the AIRPULLER AP 95.

### The AIRPULLER AP 95 works as follows:

- it welds on the pin electrode,
- there is an upward stroke of the panel,
- against the pre-adjusted height,
- along with simultaneous cooling to stabilise the body panel,
- ending with a final twist of the pin electrode.

The whole operating sequence is completed within seconds. The very short welding time of approx. 0.3 seconds, heats up the metal at the outside surface without damaging the panel inner surface.

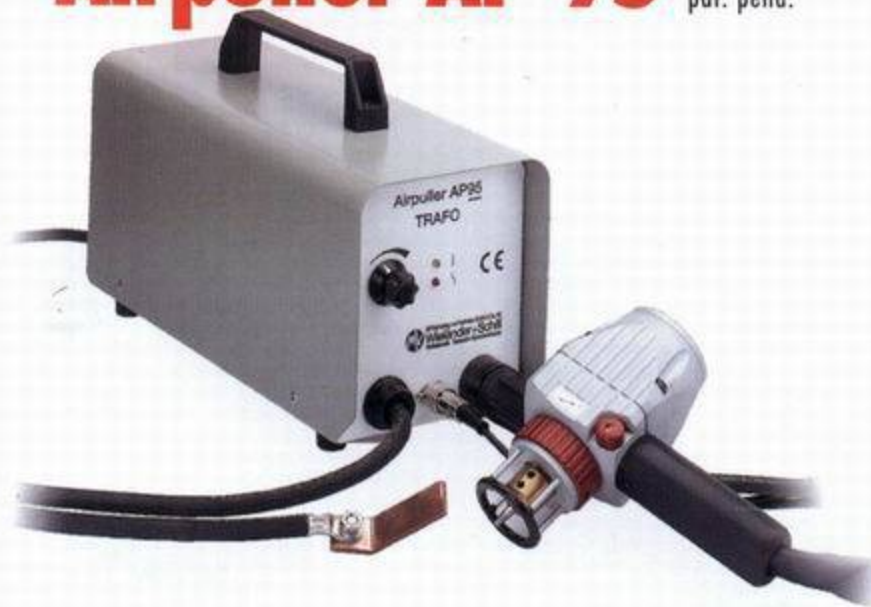

### Technical data:

Measures: 190 x 170 x 80 mm

Air pressure: 6 - 8 bar

Weight: 1,8 kg

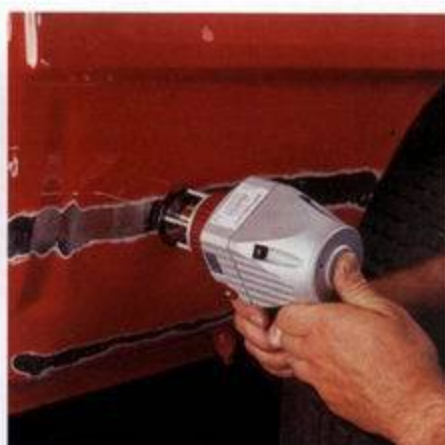

The AIRPULLER AP 95 fully meets the CE Standard.

## The new and professional panel dent removing system

The AIRPULLER AP 95 is so simple to use, you can use it immediately without any special training, and you will see how clever it is when removing long scratches and scrapes on the side panels of cars. The machine is user-friendly and in a very short time you get perfect results.

Our slogan is: to repair instead of replacing!

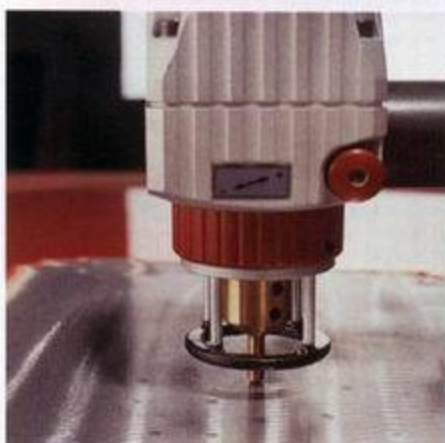

The AIRPULLER AP 95 is supplied in a clear and user-friendly design. The **red ring** is turned manually to precisely fix the pulling height. In the centre is the pin electrode for panel removing and the additional copper electrode is for the panel shrinking.

AIRPULLER AP 95 can be supplied with its own special control unit or you may use the Multispot M 3/M 4/M 6/M 8 or other similar products.

The complex design of modern automobile doors, for instance with side damage protection and side air bags, means the repairing of the dented parts is very expensive and in some cases it is not even possible. With the AIRPULLER AP 95 you can remove the bumps and scratches from the outside without needing to remove any of the inside trimmings!

New: Deeper dents can be pulled out with the **Powerlift** and at the same time the tension of the panel's surface is eliminated by light hammer blows.

### Delivery Contents: Art.No. 3101

- AIRPULLER AP 95 in its individual case
- The basic accessory kit
- Multi-lingual operating instructions

### Accessory:

- TRANSFORMER AP 95 Art.No. 3201
- Set with 6 electrodes f. AP 95 Art.No. 3112
- Diamond file Art.No. 3118
- Trolley for AP 95 Art.No. 3220
- AP Powerlift** Art.No. 3250
- Electrode set for Powerlift Art.No. 3262
